**\* Note:**

1. If student completes the MOOC course such as NPTEL/SWAYAM etc. which has rigorous evaluation scheme. Student needs complete online/certification course approved by DPGC and produce certificate of online or certification course at the time of ESE. if student fails to produce this certificate, he or she will not be eligible to give ESE of Online/certification course.

2. If student completes certificate course such as C++/JAVA/PYTHON/VB, then supervisor has to conduct in semester evaluation and submit marks to COE.

**# Note:**

Topic should be selected based on relevance to societal needs, value addition to existing facilities in the institute, industry need, problems of national importance, research and development in structural engineering. The student should complete the following:

- Comprehensive Literature survey based on papers published in standard journals.
- Gap Analysis
- Problem Identification
- Define dissertation objectives
- Complete Preliminary design with feasibility analysis
- Implementation and Validation of models
- Prepare report and give presentation

<b>Class:- F.Y. M. Tech.</b> <b>Structural Engineering</b>	Semester-I
Course Code: <b>CES1012</b>	Course Name: <b>Advanced Structural Analysis</b>

L	T	P	Credits
3	---	--	3

**Course Description:**

Advanced Structural analysis is offered as core course at the first semester of Civil Structural Engineering post graduate program. This course is focuses on basic concept and different analytical tools for understanding the behavior of especially of statically indeterminate structures. This course divided into four modules. The first module contains influence line diagram for cantilever, fixed, continuous beams, portal frames and arches. The Second module focuses on analysis beams curved in plan and Beam-Columns. The module three includes member oriented and structure oriented stiffness and flexibility matrix methods. Module four contains Boundary value problems

This course intends to build the competency in the students to identify indeterminate structures, and to analyze the structures like fixed beam, continuous beam, arches and portal frames. Also advanced topic such as beams curved in plan, beam-column analysis, matrix methods of analysis of structures and solution of boundary value problems

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Construct of ILD for reactions, S.F. and B.M. for indeterminate structures
2. Draw SFD, BMD and TMD for beams curved in plan for various loading and support condition
3. Analyze the beam-columns
4. Analyze the skeleton structures using stiffness analysis
5. Use direct stiffness method understanding its limitations

**Prerequisite:**

The course learns through prerequisite courses of Engineering Mathematics, Engineering Mechanics, Solid Mechanics and Theory of Structures should have a clear understanding of methods of analysis of structures.

Course Content		
Unit No	Description	Hrs
1.	<b>Influence Lines:</b> Physical Significance, Muller Breslau's Principle, Moment distribution method, ILD for propped cantilever, fixed beams, continuous beam, portal frames and two hinged arches	06
2.	<b>Beams Curved in Plan:</b> Analysis of determinate and indeterminate beams curved in plan such as cantilever circular arch, semicircular beams fixed at two ends subjected to point load and udl, simply supported semicircular beams, circular ring beam.	06
3.	<b>Beam Columns:</b> Governing differential equation, geometric and material nonlinearity, analysis of beam-columns simply and fixed supported at ends with concentrated load, moment and uniformly distributed load, magnification factor	06
4.	<b>Member Oriented Stiffness Matrix:</b> Stiffness matrices for beam, truss, plane frame, pin and rigid jointed space frame element on member axis, transformation of matrices on structure axes, overall joint stiffness matrix and nodal vector, assembly rules, calculation of member end forces	06
5.	<b>Structure Oriented Stiffness Method:</b> Flexibility and stiffness matrices, analysis of continuous beams, trusses and plane frames by structure oriented approach	
6.	<b>Boundary Value Problems:</b> Approximate solution of boundary value problems, Modified Galerkin Method for one-dimensional BVP, Matrix formulation of the Modified Galerkin Method	06

<b>Class: First Year M.Tech. Structural Engineering</b>	<b>Semester: I</b>
<b>Course Code: CES1022</b>	<b>Course Name: Advanced Solid Mechanics</b>

L	T	P	Credits
3	---	--	3

**Course Description:**

This course is introduced at first semester of F Y M Tech Structural Engineering as core course. It consists of study of stress, strain and displacement of deformable bodies and relationship between them. Also, torsion of solid non-circular cross sections and thin tubes is included in this course. Plasticity, yield criteria and elasto-plastic loading for beams and thick cylinders are also studied in this course.

**Course Learning Outcomes**

At the end of the course, students will be able to

1. Analyze bodies for stresses and strains.
2. Analyze prismatic bars and tubes subjected to torsion
3. Analyze beams and thick cylinders for elasto-plastic loading.

**Prerequisite:** This course requires the knowledge of basic mathematics and structural analysis.

Unit No	Description	Hrs
<b>1.</b>	<b>Stress</b> Basic concepts of continuum, concept of stress, equilibrium equations, stress on oblique plane, stress transformation, principal stresses, stress invariants, deviatoric stresses, maximum shear stress, octahedral stresses, plane stress.	<b>06</b>
<b>2.</b>	<b>Strain</b> Strain at a point, concept of strain, strain components, compatibility equations, strain transformation, principal strains, strain invariants, deviatoric strains, maximum shear strain, octahedral strains, plane strain	<b>06</b>
<b>3.</b>	<b>Stress-strain relations</b> Generalized Hooke's law, stress strain relationship for isotropic material, strain displacement and compatibility relations, Airy's stress function and its applications.	<b>06</b>
<b>4.</b>	<b>Torsion</b> Torsion of Prismatic Bars: Saint Venant's method, Prandtl's membrane analogy, torsion of elliptical, triangular and rectangular bar, torsion of thin tubes.	<b>06</b>

<b>Class:- First Year M. Tech Structural Engineering</b>	Semester-I
Course Code: CES1032	Course Name: <b>Structural Dynamics &amp; Earthquake Engineering</b>

L	T	P	Credits
4	---	--	4

**Course Description:**

Structural Dynamics is offered as a core course at the first semester of Civil Structural Engineering postgraduate programme. This course focuses on vibrations types and their causes. Response for single and multiple degree of freedom system by fundamental theory. This course also throws light on response by numerical methods. This course also focuses on elements of seismology and static method for lateral load evaluation.

This course intends to build the competency in the students to evaluate responses developed due to vibrations caused by various means. This theoretical knowledge will help to student for studying behavior of structures under earthquake loading.

**Course Learning Outcomes:**

After successful completion of this course students will be able to:

1. Analyze and study of the response of single and multi-degree freedom systems by fundamental theory and equations of motion.
2. Analyze and study of the response of single and multi-degree freedom systems by numerical methods.
3. Develop mathematical solutions to predict system response subjected to dynamic loads.
4. Explain causes, measurements and sources of earthquakes.
5. Evaluate lateral loads developed on multi-storeyed structures by the Response Spectrum Analysis Method and Static Equivalent Method.

**Prerequisite:**

As a prerequisite to study this course, the students must possess the knowledge of D'Alembert's principle, differential equations and Integration by parts.

<b>Course Content</b>		
Unit No	Description	Hrs
1.	<b>Introduction</b> Introduction to dynamic problems of Civil Engineering, Concept of degrees of freedom, D'Alembert's principle, Types of vibrations, Principle of virtual displacement and energy, Single degree of freedom systems, Examples of Single	08

Course Code: <b>CES1042</b>	Course Name: <b>Structural Design Lab - I</b>

L	T	P	Credits
-	-	4	2

**Course Description:**

Structural design lab – I is the core laboratory course offered in first semester of M. Tech. Structural Engineering program. This laboratory course is mainly focused on analysis and design of steel structures using standard software packages like STAAD- Pro, ETABS and SAP etc. Students are expected to design various steel structures and prepare drawing of the same.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Analyze and design of the steel structures such as truss, Towers, Steel Building Frame and Hoarding Board etc. using standard software packages.
2. Interpret the results of analysis and design obtained from the software.
3. Prepare drawings of detailing of structural elements.

**Prerequisite:**

As a prerequisite to this course student must know limit state design of steel structures

<b>Course Content</b>		
<b>Experiment No</b>	<b>Description</b>	<b>Lab Hrs</b>
1.	Analysis and design of truss	5
2.	Structural drawing of truss	4
3.	Analysis and design of transmission tower	5
4.	Analysis and design of steel building (Frame)	5
5.	Analysis and design of hoarding boards	5

Class: <b>First Year M. Tech. Structural Engineering</b>	Semester- I	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
Course Code: <b>CES1052</b>	Course Name: <b>Advanced Concrete Technology Lab</b>	-	-	<b>2</b>	<b>01</b>

**Course Description:**

The Advanced Concrete Lab course focuses on the experimental study of properties of various concrete ingredients and concrete elements / structure in order to analyze the quality and durability aspects. The course deals mix design methods of some special concretes and study of their properties in fresh and hardened state. The course aims to carry out condition survey of any structure for assessing its quality status using various standard and advanced NDT tools / equipment.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. determine properties of ingredients and different types of concretes (ordinary & special) using standard procedures.
2. design ordinary and special concretes using existing and new methods of mix design.
3. perform various durability and non-destructive tests on concrete elements / structures using standard and advanced tools / equipment for assessing the quality.
4. examine the concrete elements / structures by carrying out condition survey and recommend appropriate methods / techniques for their repair / strengthening works.

**Prerequisite:**

Fundamental knowledge of basic ingredients of concrete and properties of ordinary concrete

<b>Experiment No</b>	<b>Description</b>
1.	Experimental verification of properties of ingredients of various types of concrete
2.	Design of concrete Mixes of Ordinary and Special Concretes – HSC, SCC,
3.	Tests to determine properties of special concrete in fresh and hardened state- a. Workability tests b. Compressive Strength
4.	Experimental study of behavior of concrete members under flexure /shear.

Course Code: <b>CES1062</b>	Course Name: <b>Mini Project I</b>

L	T	P	Credits
-	-	2	01

**Laboratory Work (Mini Project):**

Mini project shall be delivered on one of the advanced topics chosen in consultation with the supervisor, based on dissertation work/ societal problem / special structure. A hard copy of the report (25 to 30 pages A4 size, 12 fonts, Times New Roman, single spacing single side printed, preferably in TRM format) should be submitted to the Department Post Graduate Committee (DPGC) before delivering the seminar. A copy of the report in soft form must be submitted to the supervisor, along with other details, if any. Minimum 03 presentations should be delivered by the students.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Identify research problem
2. Prepare and present statement of Purpose
3. Perform analysis work.
4. Communicate with outside agencies.
5. Write report and Present the work carried out.
6. Develop self-learning ability.

<b>Class: First Year M. Tech.</b> <b>Structural Engineering</b>	Semester-I
Course Code: <b>CES1072</b>	Course Name: <b>Advanced Design of Steel Structures (PE I)</b>

L	T	P	Credits
3	---	--	3

**Course Description:** This course is introduced at the first semester of F Y M Tech Structural Engineering as program elective. It consists of design of steel structures, components, design of plate girders, beam-columns, portal frames, cold formed light gauge steel sections, composite sections and bolted and welded connections.  
This course intends to build confidence in students to design elements steel structures and their connections.

**Course Learning Outcomes: Course Outcomes:** At the end of the course, students will be able to

1. Design plate girder, beam columns, portal frames, cold formed light gauge steel sections, composite sections.
2. Design welded and bolted connection.

**Prerequisite:** This course requires the knowledge of structural analysis and design of basic structural elements of steel structures.

Course Content		
Unit No	Description	Hrs
1.	<b>Plate girder</b> Introduction, plate buckling, web buckling in shear, tension field action, design of plate girder,	06
2.	<b>Design of beam-columns</b> Introduction, general behavior of beam-columns, P- $\Delta$ effects, elastic lateral-torsional buckling of beam columns, interaction between beam-column and structure, design of beam columns, beam-columns subjected to tension and bending, crane columns.	06
3.	<b>Design of portal frames</b> Introduction, plastic analysis of rectangular portal frames, plastic analysis of gable portal frames, design of portal frames.	06
4.	<b>Cold formed light gauge steel sections</b> Introduction, behavior of light gauge sections, design of axially loaded compression members, design of beams. deflection calculation.	06

<b>Class: First Year M. Tech Structural Engineering</b>	Semester-I
Course Code: <b>CES1082</b>	Course Name: <b>Structural Health Monitoring</b>

L	T	P	Credits
3	---	--	3

**Course Description:**

Structural Health Monitoring is offered as an Elective course at the first semester of Civil Structural Engineering postgraduate programme. This course focuses on various facts of Health monitoring of existing damaged structures. Various materials used in carrying out rehabilitation works forms the important aspect of this course. The course throws light on effects of various weathering agencies on serviceability and durability of the structures. It also includes preventive measures on various aspects and provides the information on inspection, assessment procedure for evaluating a damaged structure, causes of deterioration and testing techniques. The course covers the basic principles and methods for strengthening the existing structures.

This course intends to build the competency in the students to diagnose the causes of damaged concrete structures and analyze for rehabilitating them with suitable repair techniques or methods.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Carry out non-destructive testing of various elements of the structure for strength evaluation of existing structures.
2. Demonstrate various techniques for strengthening the existing structures.
3. Explain the assessment procedure for evaluating a damaged structure.

**Prerequisite:**

As a prerequisite to study this course, the students must possess the knowledge of concrete technology as a whole, the basic chemistry of the concrete and various mechanisms involved in the concrete.

<b>Course Content</b>		
Unit No	Description	Hrs
1.	<b>Structural audit:</b> Definition and objective of Condition survey, stages of condition survey (Preliminary, Planning, Inspection and Testing stages) Possible defects in concrete structures, quality control of concrete structures	06

**K.E. Society's**  
**Rajarambapu Institute of Technology, Sakharale**

<b>Structural Engineering</b>					
Course Code: <b>CES1092</b>	Course Name:	3	-	--	3
	<b>Advanced Concrete Technology</b>				

**Course Description:**

The Advanced Concrete Technology course focuses on properties of newly developed concrete ingredients such as supplementary cementitious materials, artificial sand, chemical and mineral admixtures etc. The quality control and durability aspects of the concrete are also considered in the course content. The course throws light on various types of special concretes, mix design methods, manufacturing processes, properties in fresh and hardened state. The course aims to give updated information in the field of concrete technology involving modern trends and techniques.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. illustrate the micro-structural aspects associated with concrete/concrete ingredients and their effect on concrete quality, strength and durability properties.
2. design special concretes using existing and new methods of mix design.
3. explain various types of special concretes, their properties and methods of manufacturing and placing.
4. discuss various special processes and new techniques involved in various concreting jobs.
5. analyze qualities of fresh and hardened concrete / concrete elements using appropriate destructive or non destructive testing methods for evaluating quality.
6. identify and discuss various mechanisms affecting durability of concrete / concrete structures /elements.

**Prerequisite:**

Fundamental knowledge of basic properties of concrete ingredients is required.

<b>Class: First Year M. Tech Structural Engineering</b>	Semester-I	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
Course Code: <b>SHP517</b>	Course Name: <b>Numerical Methods for Structural Engineers</b>	3	-	--	3

**Course Description:**

Numerical Methods for Structural Engineers is a core subject introduced at Semester I of first year M. Tech. Civil Structural Engineering. This course intends to build the competency in the students to apply the knowledge of mathematics to the solution of engineering problems and to analyze it.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Estimate the error.
2. Apply the relevant numerical method for interpolating the polynomial
3. Develop the equation to be fitted and fit the curve for given data
4. Estimate numerically the solution of given algebraic equation.
5. Use the relevant method for solving the simultaneous linear equations and compute the Eigen values.
6. Construct the fuzzy set for given linguistic variable and apply fuzzy logic.

**Prerequisite:**

Undergraduate Engineering Mathematics

<b>Unit No.</b>	<b>Details of Content</b>	<b>Hrs.</b>
1.	<b>Unit-I Error Analysis and Estimation:</b> Error and their analysis, A general error formula, Error in numerical computations, Error in series approximation.	6
2.	<b>Unit-II Interpolations:</b> Introduction, Finite differences, Relation between operators, Differences of a polynomial, Factorial notation, Missing term technique, Lagrange's interpolation formula, Newton's Divided difference formula.	6

**Course Description:**

Structural design lab – II is the core laboratory course offered in second semester of M. Tech. Structural Engineering program. This laboratory course is mainly focused on analysis and design of concrete structures using standard software packages like STAAD- Pro, ETABS and SAP etc. Students are expected to design various steel structures and prepare drawing of the same.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Analyze and design of the RCC structures such as building, retaining wall, flat slab and foundations using standard software packages.
2. Interpret the results of analysis and design obtained from the software.
3. Prepare drawings of detailing of structural elements.

**Prerequisite:**

As a prerequisite to this course student must know limit state design of steel structures

<b>Course Content</b>		
Experiment No	Description	Lab Hrs
1.	Analysis and design RCC building	8
2.	Structural drawing of RCC building	8
3.	Analysis and design of RCC retaining wall	8
4.	Analysis and design of flat slab	8
5.	Analysis and design of water tank	8
6.	Analysis and design of foundation	8

<b>Course Code: CES2042</b>	<b>Course Name: Structural Dynamics and Earthquake Engineering Lab</b>

<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
-	-	2	1

**Course Description:**

Model testing laboratory is a core lab in the 2<sup>nd</sup> semester. This lab focuses on study of behavior of single and multi-storied structures under dynamic loads. The responses are measured with help of measuring instruments. This laboratory develops skills among the students such as leadership, life long learning skills and applications of fundamentals of vibrations for calculation of responses.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Interpret the response of structures due dynamic loading.
2. Prepare the models.
3. Conduct model testing for static and dynamic loading.
4. Conduct model testing for free and forced vibrations.

**Prerequisite:**

As a prerequisite to this course student should apply theory of fundamentals of vibrations for single and multiple degrees of freedom systems.

<b>Course Content</b>		
<b>Experiment No</b>	<b>Description</b>	<b>Lab Hrs</b>
1.	Dynamics of a three storied building frame subjected to harmonics base motion.	4
2.	Dynamics of a vibration absorber.	4
3.	Dynamics of one-span and two-span beams.	4
4.	Earthquake induced waves in rectangular water tanks.	4
5.	Dynamics of a one-storied building frame with planar asymmetry subjected to harmonic base motions.	4
6.	Vibration isolation of a secondary system.	4

Course Code: <b>CES2052</b>	Course Name: <b>Mini Project II</b>

L	T	P	Credits
-	-	4	02

**Laboratory Work (Mini Project):**

Mini project shall be delivered on one of the advanced topics chosen in consultation with the supervisor, based on dissertation work/ societal problem / special structure. A hard copy of the report (25 to 30 pages A4 size, 12 fonts, Times New Roman, single spacing single side printed, preferably in TRM format) should be submitted to the Department Post Graduate Committee (DPGC) before delivering the seminar. A copy of the report in soft form must be submitted to the supervisor, along with other details, if any. Minimum 03 presentations should be delivered by the students.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Identify research problem
2. Prepare and present statement of Purpose
3. Perform analysis work.
4. Communicate with outside agencies.
5. Write report and Present the work carried out.
6. Develop self-learning ability.

<b>Class:- First Year M. Tech Structural Engineering</b>	Semester-II
Course Code: CES2062	Course Name: <b>Advanced Earthquake Engineering (PE-II)</b>

L	T	P	Credits
3	---	--	3

**Course Description:**

Design of Earthquake Resistant Structures is offered as a program elective course at the first semester of Civil Structural Engineering postgraduate programme. This course focuses on fundamentals/elements of seismology, conceptual design of earthquake resistant structures, principles of planning, and strong column weak beam concept. This course also focuses on lateral load evaluation and ductile elements. IS cod provisions for ductility of structures and water tanks.

This course intends to build the competency in the students to evaluate loads developed due to earthquake loadings. This theoretical knowledge will help to student for studying behavior of structures under earthquake loading and design structures for EQ Loads.

**Course Learning Outcomes:**

After successful completion of this course students will be able to:

1. Evaluate lateral loads developed on multi-storeyed structures by the Response Spectrum Analysis Method.
2. Apply ductility requirements for the design of structural components.
3. Assess seismic performance of non-structural components and structural components and identify effective measures to mitigate potential damage.
4. Apply clauses given in IS codes to increase resistance of structures to earthquake force.
5. Apply new techniques for controlling the vibrations of the structures.

**Prerequisite:**

As a prerequisite to study this course, the students must possess the knowledge of Fundamentals of vibration, natural frequency, resonance condition, mode shapes.

Class: <b>F.Y. M. Tech.</b> <b>Structural Engineering</b>	Semester: <b>II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
Course Code: <b>CES2072</b>	Course Name: <b>Theory and Applications of Cement Composites (PE-II)</b>	3	--	--	3

**Course Description:**

The course focuses on various composite materials and study of their properties to understand their behavioral aspects. The main objective of this course is to analyze and design the cement composites elements or structures and study their mechanical behavior, uses and applications.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Formulate constitutive behavior of composite materials – Ferrocement, SIFCON and Fibre Reinforced Concrete - by understanding their strain- stress behavior.
2. Classify the materials as per orthotropic and anisotropic behavior.
3. Estimate strain constants using theories applicable to composite materials.
4. Analyze and design structural elements made of cement composites.

**Prerequisite:**

Fundamental knowledge of basic properties of concrete ingredients is required.

**Course Content**

Unit No	Description	Hrs
1.	<b>Introduction:</b> Classification and Characteristics of Composite Materials - Basic Terminology, Advantages Stress-Strain Relations- Orthotropic and Anisotropic Materials, Engineering Constants for Orthotropic Materials, Restrictions on Elastic Constants, Plane Stress Problem, Biaxial Strength, Theories for an Orthotropic Lamina.	06

<b>Class:- First Year M. Tech Structural Engineering</b>	<b>Semester-II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>Course Code: CES2082</b>	<b>Course Name: Structural Optimization (PE-II)</b>	<b>3</b>	<b>-</b>	<b>--</b>	<b>3</b>

**Course Description:**

Structural optimization can be defined as the process of finding the optimal parameters, which yield maximum or minimum value of an objective function, subject to certain set of specified requirements called constraints. Such problem of optimization is known as constrained optimization problems or nonlinear programming problems. Most design optimization problems in structural engineering are highly nonlinear, involving mixed (discrete and continuous) design variables under complex constraints, which cannot be solved by traditional calculus - based methods and enumerative strategies.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Use variational principle for optimization
2. Apply optimization techniques to structural steel and concrete members.
3. Design using frequency constraint.

**Prerequisite:** Reinforced Concrete Structures, Design of Steel Structures.

<b>Class: First Year M. Tech Structural Engineering</b>	Semester-II	L	T	P	Credits
Course Code: CES2102	Course Name: <b>Design of Pre-stress Concrete Structures (PE-III)</b>	3	-	--	3

**Course Description:**

Pre-stressed concrete is a form of concrete used in construction which is "pre-stressed" by being placed under compression prior to supporting any loads beyond its own dead weight. This compression is produced by the tensioning of high-strength "tendons" located within or adjacent to the concrete volume, and is done to improve the performance of the concrete in service. Tendons may consist of single wires, multi-wire strands or threaded bars, and are most commonly made from high-tensile steels, carbon fiber or aramid fiber. The essence of pre-stressed concrete is that once the initial compression has been applied, the resulting material has the characteristics of high-strength concrete when subject to any subsequent compression forces, and of ductile high-strength steel when subject to tension forces. This can result in improved structural capacity and/or serviceability compared to conventionally reinforced concrete in many situations.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

- 1.Explain the concept of pre-stressing, behavior of the pre-stressed structures vis-à-vis that of the RCC structure.
- 2.Choose the decision with respect to the choice of pre-stressed section over RCC.
- 3.Describe the application of these techniques in civil engineering construction.
- 4.Analyze the various pre-stressed components of the structures and design the same.
- 5.Design the various pre-stressed components of the structures and design the same.

**Prerequisite:**Reinforced Concrete Structures, Strength of materials, Concrete Technology.

<b>Course Code: CES2122</b>	<b>Course Name: Design of Advanced Concrete Structures (PE-IV)</b>	<b>3</b>	<b>-</b>	<b>--</b>	<b>3</b>

**Course Description:**

The course 'advanced design of concrete structures' mainly focuses on analysis and design of various concrete elements and structures subjected to different types of loads using latest methods of analysis and design.. The analysis and design of concrete structures namely bunkers, silos, water tanks, flat slabs, grid floor slabs deep beam etc. forms the core content of the course. The RCC structures exposed to higher temperatures or fire are also considered for analysis and determining their capacity in the event of fire.

**Course Outcomes:**

At the end of the course, the student will be able to:

1. Analyze the special R.C.C. structures.
2. Design and prepare detail structural drawings

**Prerequisite:**The student should possess fundamental knowledge of concrete technology, RCC, earthquake engineering and basic methods of analysis and design of RCC elements and structure.

<b>Course Content</b>		
<b>Unit No</b>	<b>Description</b>	<b>Hrs</b>
<b>1.</b>	<b>Analysis and design of slabs– Yield line theory</b> Various patterns of yield lines, Assumptions in yield line theory, Equilibrium and virtual work method of analysis, Design of various slabs such as rectangular, circular using yield line theory.	<b>06</b>
<b>2.</b>	<b>Design of Reinforced Concrete Members for Fire Resistance:</b> Introduction, ISO 834 standard heating conditions, Grading or classifications, Effect of high temperature on steel and concrete, Effect of high temperatures on different types of structural members, Analytical determination of the ultimate bending moment, Capacity of reinforced concrete beams under fire.	<b>06</b>

Class: <b>First Year M. Tech Structural Engineering</b>	Semester-II
Course Code: <b>CES2132</b>	Course Name: <b>Design of Industrial Structures (PE-IV)</b>

L	T	P	Credits
3	---	--	3

**Course Description:**

This is introduced at the second semester of F Y M Tech Structural Engineering. This covers the design of various industrial structures- gantry girders, portal frames, steel bunkers & silos, chimneys, water tanks and connections.

**Course Learning Outcomes:**

At the end of the course, the student will be able to:

1. Design the Steel Gantry Girders.
2. Design the Steel Portal, Gable Frames.
3. Design Steel Bunkers and Silos.
4. Design Chimneys and Water Tanks.

**Prerequisite:**

This course requires the knowledge of structural analysis and design of basic structural elements of steel structures

**Course Content**

Unit No	Description	Hrs
1	<b>Steel Gantry Girders</b> – Introduction, loads acting on gantry girder, permissible stress, types of gantry girders and crane rails, crane data, maximum moments and shears, construction detail, design procedure.	06
2	<b>Portal Frames</b> – Design of portal frame with hinge base, design of portal frame with fixed base -Gable Structures – Lightweight Structures.	06
3	<b>Steel Bunkers and Silos</b> – Design of square bunker – Jansen's and Airy's theories – IS Code provisions – Design of side plates – Stiffeners – Hooper – Longitudinal beams Design of cylindrical silo – Side plates – Ring girder – stiffeners.	06
4	<b>Chimneys</b> – Introduction, dimensions of steel stacks, chimney lining, breech openings and access ladder, loading and load combinations, design considerations, stability consideration, design of base plate, design of foundation bolts, design of	06

<b>Class: Final Year M. Tech Structural Engineering</b>	Semester-II
<b>Course Code: CES2142</b>	<b>Course Name: Design of formwork (PE-IV)</b>

L	T	P	Credits
3	--	--	3

**Course Description:**

Design of formwork is elective course offered in 2<sup>nd</sup> semester which mainly focusses on types and design of falsework required for concrete structures (i.e. formwork). Although cost of formwork contributes significantly to the total reinforced concrete construction cost and formwork failure will result in a very complicated construction problem, formwork design is often neglected and left to the foreman to design. Therefore, in this course emphasis is given on materials used for form work, design of various formworks for regular structural members, design of formwork for special structures, some special formwork systems and failure of formwork.

**Course Learning Outcomes:**

After successful completion of the course, students will be able to,

1. Select proper formwork, accessories and material.
2. Design the form work for Beams, Slabs, columns, Walls and Foundations.
3. Design the form work for Special Structures.
4. Explain the working of flying formwork.
5. Judge the formwork failures through case studies.

**Prerequisite:**

Basic knowledge of concrete technology and construction procedures.

**Course Content**

Unit No	Description	Hrs
1.	<b>Introduction:</b> Introduction to formwork system, Requirements of formwork and Factors affecting Selection of Formwork	04
2.	<b>Formwork Materials</b> Timber, Plywood, Steel, Aluminum, Plastic, and Accessories. Horizontal and Vertical Formwork Supports.	04

**Field Work:**

In the field training work, the student is expected to get training in the industry, related to structural engineering for duration of 4 weeks for at least 6 hours per day. Student should work as an employer of the organization. He should learn work culture and latest development in structural engineering. Student should write a report on the field training and submit to department for ISE evaluation at the beginning of third semester. Student should include the certificate from company regarding satisfactory completion of the field training.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Identify training area
2. Prepare on site work report of training
3. Perform analysis work
4. Communicate with agencies
5. Generate report and Present the work carried out

**Online Certification Course:**

1. Student should select any one course floated by NPTEL related to their dissertation topic in consultation with supervisor.
2. Student should report and maintain file of weekly submission as per assignments given by NPTEL.
3. Student should attach weekly grade sheet in the hard copy form to weekly submission file.
4. Final written exam is compulsory to all and it will be scheduled by NPTEL.
5. Submit the final grade sheet with course completion certificate.
6. The final grades will be given based on grades offered by NPTEL and file submission.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Develop technical competence in skills of structural engineering field.
2. Apply the techniques for structural engineering practice.
3. Develop oral and written presentation skills for structural engineering projects.
4. Design and interpret data for structural engineering projects.

Class: <b>S Y M. Tech.</b> <b>Structural Engineering</b>	Semester- <b>III</b>
Course Code: <b>CES3032</b>	Course Name: <b>Dissertation Phase-I</b>

L	T	P	Credits
-	-	8	04

**Dissertation phase I and synopsis approval presentation:**

Under the guidance of faculty called as ‘\_Supervisor’, PG student from second year is required to do innovative and research oriented work related to various theory and laboratory courses he/she studied during previous semesters. Dissertation work should not be limited to analytical formulation, experimentation or software based project. Student can undertake an interdisciplinary type project with the prior permission of DPGC from both departments.

**Synopsis:**

Student need to carry out exhaustive literature survey with consultation of his/her supervisor for not less than 25 reputed national international journal and conference papers. Student should make the Synopsis Submission Presentation (SSP) with literature survey report to DPGC and justify about the innovativeness, applicability, relevance and significance of the work. At the time of presentation, student shall also prepare Synopsis of the work and submit to department for approval. Student shall submit synopsis of dissertation as per the prescribed format in 02 copies to department.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Identify research problem from literature survey
2. Prepare research design for identified problem
3. Prepare synopsis report
4. Present the work plan to be carried out.

Course Code: <b>CES3042</b>	Course Name: <b>Dissertation Phase-II</b>

L	T	P	Credits
-	-	12	06

**Dissertation phase II:**

Phase II evaluation is based on End semester Examination (ESE) which is based on the work during the semester. It is expected that student shall present preliminary results from his/her work during the semester with report as per prescribed format. DPGC including external examiner as expert will approve the report and progress of student.

ISE will be evaluated DPGC and ESE will be evaluated by DPGC and one external expert. Student will submit a report (soft bound before 1 week of date of presentation) as per prescribed format and present to DPGC for ISE and ESE. If student is not showing satisfactory performance in, then he/she will be given grace period of two weeks. After two weeks student will again be evaluated as per guidelines given in rules and regulations.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Prepare the set up for experimentation/ develop/ learn software.
2. Perform experimental/software analysis for validation of research work.
3. Generate report of work carried out.
4. Present the work carried out.

Course Code: <b>CES4012</b>	Course Name: <b>Dissertation Phase-III</b>

L	T	P	Credits
-	-	10	06

**Dissertation Phase III:**

Student is required to give a presentation on the progress of his/her dissertation work in front of supervisor and DPGC. It is expected that up to this stage almost 90% of dissertation work is almost completed. Student will make the presentation and seek the suggestions from the supervisor and DPGC. Supervisor and DPGC will ensure that work carried out by the student till this stage is satisfactory and in compliance with synopsis of the dissertation submitted by student. This is In Semester Evaluation (ISE).

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Perform experimental/software analysis for developing research work
2. Generate report work carried out.
3. Present the work carried out.

Class: <b>S Y M. Tech.</b> <b>Structural Engineering</b>	Semester- IV
Course Code: <b>CES4022</b>	Course Name: <b>Dissertation Viva Voice</b>

L	T	P	Credits
-	-	18	10

**Dissertation Phase IV:**

This is final presentation, i.e., viva voce of the dissertation. Student will be allowed to make this presentation only if he has submitted duly completed and certified dissertation report. Students will make the presentation in front of supervisor, DPGC and external supervisor. Examiners will check whether the dissertation work is in full compliance with synopsis of dissertation or not. Dissertation will assess on the basis of quality of dissertation work, efforts taken by the student, quality of paper(s) published on the dissertation work, etc. Student should publish work carried by him along with supervisor in reputed journals as per institute rules and regulations.

**Course Outcomes:**

After successful completion of the course, students will be able to,

1. Perform experimental/software analysis for developing research work.
2. Generate report work carried out.
3. Publish a research paper in journals/conference.
4. Prepare report using total work done as dissertation report
5. Present the work carried out.
